

NRG: Mac & FileMaker Shipping Software

How do I export Zen Cart order data in able to import into NRGship Pro for UPS?

In order to import Zen Cart data into NRGship Pro for UPS you must first install the Export Shipping Information module. Be sure to read the installation instructions because you must create a new column in your Zen Cart database. Once you have installed this module, you then need to replace the shipping_export.php file with the attached file which simplifies the export process.

Next, from the Tools menu select the Export Shipping/Order Information option. Choose the proper Order Status Option from the popup and hit the Export for NRGship button to download the data.

Once you have downloaded a data file, you can then run the Zen Cart import from NRGship.
